

Having trouble keeping your plants lush and green like they are in the shops?  
Check out this simple diagnosis chart - your plants could be lacking in macro-nutrients, easily fixed with some simple fertilising!

Chat to our friendly staff today and get those plants back to beautiful!

## Plant Diagnosis Chart

**Calcium:** New leaves misshapen or stunted. Existing leaves remain green.

**NEW GROWTH**

**Iron:** Young leaves are yellow and white with green veins. Mature leaves are normal.

**OLD GROWTH**

**Nitrogen:** Upper leaves are light green where lower leaves are yellow. Bottom or older leaves are yellow and shrivelled.

**Potassium:** Yellowing at the tips and edges, usually in younger leaves. Dead or yellow patches develop on leaves.

**Carbon Dioxide:** White deposit on leaves. Stunted growth, and plants die back.

**Manganese:** Yellow spots and or elongated holes between veins.

**Phosphate:** Leaves are darker than normal and loss of leaves.

**Magnesium:** Lower leaves turn yellow from outside going in. Veins remain green.
